PROFILE

Versatile and detail-oriented developer with hands-on experience in C++, Python, and JavaScript, specializing in building dynamic web applications using HTML5, CSS3, React, and Node.js. Adept at version control using Git and containerization with Docker, with a strong understanding of responsive design and RESTful API integration. Passionate about clean code, continuous learning, and delivering high-quality solutions. Skilled in both frontend and backend development, with additional experience in data entry and task automation. A fast learner and reliable team player committed to improving workflows and contributing to modern, efficient software projects.

WORK EXPERIENCE

BSCS - 3rd Semester | Self-Driven Projects

Student Developer & Aspiring Marketer

2025 - PRESENT

- Designed and developed basic websites using HTML5, CSS3, and JavaScript, focusing on responsive layouts and user-friendly design.
- Created and maintained code for small-scale personal projects using Python and C++, improving problem-solving and programming logic.
- Practiced version control with Git and collaborated on beginner-level group projects via GitHub to simulate team environments.
- Explored digital marketing fundamentals, including content creation and branding basics, through online courses and hands-on practice.
- Built simple frontend applications with React and experimented with backend logic using Node.js, emphasizing modern web development practices.
- Developed basic Docker containers to understand app deployment and scalability.
- Engaged in data entry and project documentation to improve accuracy and organizational skills.

EDUCATION

University of the Punjab - Affiliated Government Graduate College

Expected Graduation: 2027

Relevant Coursework: Programming Fundamentals, Object-Oriented Programming, Web Development, Data Structures

Activities: Participated in group coding projects, self-led web and app development using C++, Python, JavaScript, and React
